Key Word Index

(Volume 11)

Bayesian estimation 2:147
Bayesian hierarchical models 1:33
Binary variables 1:3

Categorical data 1:3, 1:33
Central location 4:263
Cluster sampling 3:207
Common factor 2:91
Composite scores 3:225
Congeneric model 4:245
Conjugate priors 1:33
Contextual analysis 1:57
Contingency tables 1:3, 1:33
Covariance adjustment 3:207
Covariance structures 1:3
Cross-sectional 3:171

Design 3:171
Dichotomous variable 4:259

Effect size 4:293
Efficiency 3:171
Error probabilities 2:117
Extreme observation 3:225

Factor analysis 1:3
Family of tests 2:117

General factor 2:91
Generalizability theory 3:197
Generalized MANOVA model 3:171
Group means 2:161

Hierarchical factor model 2:91

Ignorable treatment assignment 3:207
Incidental parameters 3:183
Incomplete data 4:245
Interaction analysis 1:33
Item response theory 1:3; 2:91

Khuri's method 3:197

Latent structure 1:3; 2:91
Latent trait model 3:183
Linear equating 4:245

m-group regression 4:275
Major axis equating method 4:245
Matching 3:207
Maximum likelihood estimation 3:183
Meta-analysis 4:293
Missing data 3:171
Mixed longitudinal 3:171
Modeling 1:33
Multilevel analysis 1:57

Observational studies 3:207

Personnel selection 4:275
Point biserial correlation 4:259
Power 2:161
Prosperity scores 3:207

Random coefficient models 1:57
Rasch model 2:147; 3:183
Reliability 3:225
Residuals 1:33
Robustness 4:263
Rules for adjustment 2:117

Satterthwaite's method 3:197
Sensitivity analysis 3:207
Simultaneous confidence intervals 3:197
Simultaneous estimation 4:275
Simulation 2:91
Substantive and statistical hypotheses 2:117

Tetrachoric correlations 1:3
Tucker's equating method 4:245

Unidimensionality 2:91
Unit of analysis 2:161

Variance components 3:197
